

# Mobility no problem!

## T10Y - Robust disinfectable multi-talent

The 10- inch Tablet PC T10Y - Ideal for industry, medicine and logistics.  
Low-maintenance construction, proven in practice, user-friendly design!

### T10Y in the medical practice: A flexible lightweight

"Since we have equipped our practice with the 'lightweight portables', everything runs much more smoothly. Our doctor's assistants have access at all times to all important patient data. Laboratory results and diagrams are much more quickly available in the practice and can also be studied jointly in the discussion with the patient. When making house calls I have all important patient data available immediately via UMTS and I can update it straightaway."

### T10Y in industry & manufacturing: Simplification through communication

"Since all employees on my project have been equipped with the portable T10Y, processes run much more quickly. Current data can be inspected by anybody on site – we can react immediately. Security checks, work and to-do lists, updates of time and resources schedules are produced and corrected by UMTS or WLAN directly on the spot."

### T10Y in logistics: Robust and dust free

"Operations can often be rough here in the warehouse. The T10Y is exactly what is needed, impact-resistant and unaffected by dust and dirt. The use of barcode labels and RFID tags simplifies my warehouse management, ordering procedures and dispatch confirmations enormously. I have all important data in front of me and completely manageable at any time and in any place!"

### T10Y in the building industry: Closeness to clients & transparency

"As construction manager and architect I can spend more time with clients or directly on site with the T10Y. I have access to my plans and construction drawings everywhere. I can take photos with the machine and present them to the customer or mail them to him. The monitoring of project processes with the digital construction site diary is now carried out much more comfortably."

### T10Y in the food industry: Freedom from germs & sophisticated technology

"I can call up vital data, thanks to UMTS, at any time and in any place, read and write RFID tags and scan in bar codes. I now monitor production processes, material procurement and status much more efficiently and can send up-to-date status reports from the production line directly to the management. We have strict hygiene regulations here and the T10Y satisfies them fully."

### T10Y in hospitals: More time for my patients

"With the portable machine it is now much easier to carry out everyday work processes: I can inspect and manage the electronic patient files quickly and at any time, make patient photos and organise the daily issue of medicines much more safely. And no hygiene problems – simply disinfect and wash off!"

### No fear of water

Cleaning and disinfecting with normal trade cleaners and disinfectants presents no problems and does not attack the resistant plastic surface. The washable, disinfectant-resistant casing is certified to IP54 standard and extremely impact resistant.

### T10Y Tablet PC

The optional docking station provides four USB interfaces, an electric mains connection, two battery-charging compartments and the electrical supply.

With screw connections underneath it guarantees effective anti-theft security of the docked machine through the electronically-controlled locking system.

Its removal is only possible by a key-combination, fingerprint scanner or software.

The back of the T10Y also has a lot to offer:  
(1) The 2 MP (mega-pixel) camera under the handle, and below it  
(2) the holder for the waterproof touch-pen,  
(3) the cover for the passive cooling, and  
(4) the two batteries which guarantee uninterrupted operation.

The aids which can be integrated optionally into the T10Y such as the 2D barcode reader, the 15.36 MHz RFID reader/writer and the UMTS modem, allow the most modern support of all possible technologies in present-day practice.

Whether for a KIS (hospital information) system, for emergency rescue services, healthcare, and for warehouse or material management, the T10Y is superbly equipped!

Operation via touch-pen and finger touch-screen makes uncomplicated handling possible in practice. The rubberised hot-keys and buttons give direct access to important functions.

The background lighting of the display is very bright through the most modern LED technology (250 nits – candela/m<sup>2</sup>) and extremely energy-efficient.

All these features, the low-maintenance design and the 24-month pick-up-and-return service make the T10Y an all-round talent for industry and medicine.

The machines are assembled in Germany to custom specifications (BTO).

A double card reader, which can be docked to any T10Y, and with an additional USB interface is already obtainable.

Special holders and accessories for transport or protection during transport are already being designed and can also be ordered as special equipment.
